Résumé ou extrait : This book provides new insights into the development of integrated approaches to peace and sustainability in the era of global change. Since the late 1980s, and in order to regulate the increasingly detrimental impacts of humans on the environment, the transition towards sustainability has been high on the agenda of researchers and policymakers alike. Meanwhile, peace considerations have expanded in recent decades to include the varied types and sources of conflict, from inter-state to intra-state conflicts due to various social, political, economic, and environmental factors. Through providing theoretical and empirical insights, this book demonstrates that sustainability and peace are intrinsically interrelated. The book elaborates on the multi-dimensional and constantly evolving concepts of sustainability and peace. In addition, the book contributes to a better understanding of the complex and dynamic interlinkages between peace and sustainability by presenting examples of pathways where sustainability and peace interact considering the different factors and contexts that are constantly shaping and reshaping the conditions for sustainable and peaceful societies.
