Résumé ou extrait : "From the Armistice in 1918 to the late 1930s, there was continuous controversy over the place of aviation in the military establishment. This book details how airpower visionaries, with varying degrees of tact, often risked charges of insubordination in preaching the gospel of airpower. As aviation technology advanced and as Army leaders were "educated" in the capabilities of aircraft, they showed genuine interest in the potential of airpower. The author contends that their decisions often favored the Air Corps and that the Air arm received a lion's share of the Army budget during a period of extreme austerity. Dr. Tate states that the Air Corps, far from being a stepchild, had become a princess by

the late 1930s." (éd.)
