Résumé ou extrait : "When Abu Bakr al-Baghdadi climbed the stairs to the pulpit in the Al Nuri Mosque in Mosul on 29 July 2014 to declare the re-establishment of the caliphate, it was, in many ways, the most important symbolic moment in the rise of a group of Islamist militants who just three years earlier had been a bedeviled cadre of guerillas fighting for their survival in the deserts of Iraq. This band of dogged extremists had gone from near extinction in 2011 to controlling a segment of territory roughly the size of Great Britain in 2014. Not only had they survived and thrived as a fighting force, now they had created

their own proto-state." (éditeur)

This book explores the social and psychological factors behind how ISIS was able to rise in Iraq, control most of it, and why most of that population eventually turned on it. Synthesized by some of the foremost experts on terrorism, the analysis is based on a unique array of public opinion data from surveys, focus groups, and interviews.
