Note sur les bibliographies et les index : Notes bibliogr. Index

Résumé ou extrait : "The Middle East is the region in which the first act of cyber warfare took place. Since then, cyber warfare has escalated and has completely altered the course of the MENA region's geopolitics. With a foreword by top national security and cyber expert, Richard A. Clarke, this is the first anthology to specifically investigate the history and state of cyber warfare in the Middle East. It gathers an array of technical practitioners, social science scholars, and legal experts to provide a panoramic overview and cross-sectional analysis covering four main areas: privacy and civil society; the types of cyber conflict; information and influence operations; and methods of countering extremism online. The book highlights the real threat of hacktivism and informational warfare between state actors and the specific issues affecting the MENA region. These include digital authoritarianism and malware attacks in the Middle East, analysis of how ISIS and the Syrian electronic army use the internet, and the impact of

disinformation and cybercrime in the Gulf. The book captures the flashpoints and developments in cyber conflict in the past 10 years and offers a snapshot of the region's still-early cyber history. It also clarifies how cyber warfare may develop in the near- to medium-term future and provides ideas of how its greatest risks can be avoided."
