Note sur le contenu : A new space craze The space environment Logics of peace The commercial space
peace Is it a trap? : arms races in space The rise of private actors Racing into the future

Résumé ou extrait : La 4e de couv. indique : "This book explores the privatization of space and its global impact on the future of commerce, peace and conflict. As space becomes more congested, contested, and competitive in the government and the private arenas, the talk around space research moves past NASA's monopoly on academic and cultural imaginations to discuss how Elon Musk's Space X and Jeff Bezos' Blue Origin is making space 'cool' again. This volume addresses the new rhetoric of space race and weaponization, with a focus on how the costs of potential conflict in space would discourage open conflict and enable global cooperation. It highlights the increasing dependence of the global economy on space research, its democratization, plunging costs of access, and growing economic potential of space-based assets. Thoughtful, nuanced, well-documented, this book is a must read for scholars and researchers of science and technology studies, space studies, political studies, sociology, environmental studies, and political economy. It will also be of much interest to policy makers, bureaucrats, think-tanks, as well as the interested general reader looking for fresh perspectives on the future of space."
