Résumé ou extrait : By 2030, the demands and concerns of citizens in many different countries of the world are likely to converge, with a major impact on national politics and international relations. This will be the result mainly of greater awareness among the world's citizenry that their aspirations and grievances are shared. This awareness will create a global citizens' agenda that emphasises fundamental freedoms, economic and social rights and, increasingly, environmental issues. The future of this agenda will depend greatly on national and global governmental decisions. However, in a world characterised by the diffusion of power, meeting the challenges of human development will depend increasingly on non-state actors, be they private companies, civil society non-governmental organisations (NGOs), or philanthropic organisations. Some extremist non-state actors are likely to present a threat to the well-being of human communities
