

# Mathematical Methods in Image Reconstruction

Type de contenu : Texte

Titre(s) : Mathematical Methods in Image Reconstruction [Texte imprimé] ; Frank Natterer, Frank Wübbeling

Auteur(s) : Natterer, Frank

Autre(s) responsabilité(s) : Wübbeling, Frank

Editeur, producteur : Philadelphia : SIAM|Society of industrial and applied mathematics, 2001

Description matérielle : 216 p.  
: 26 x 18 cm

Collection : SIAM monographs on mathematical modeling and computation

ISBN : 978-0-898716-22-1

Appartient à la collection : SIAM monographs on mathematical modeling and computation

Autres classifications : NAB\_05-0734

Note(s) : Bibliogr. Index

Résumé ou extrait : Mathematical Methods in Image Reconstruction provides a very detailed description of two-dimensional algorithms. For three-dimensional algorithms, the authors derive exact and approximate inversion formulas for specific imaging devices and describe their algorithmic implementation. Integral geometry is surveyed as far as is necessary for imaging purposes ; imaging techniques based on or related to integral geometry are briefly described in the section on tomography.
