Note sur le contenu : Introduction Merchant ships Unmanned maritime systems Lethal autonomous weapons Submarine warfare Seabed warfare Missile warfare and nuclear weapons Naval operations in outer space

Résumé ou extrait : "Disruptive technologies have transformed conflict at sea, creating a dynamic and distributed operational environment that extends from the oceans to encompass warfare on land, in the air, outer space, and cyberspace. Naval warfare throughout this integrated multi-domain, networked seascape raises choice of law decisions that include the law of naval warfare and the law of armed conflict, neutrality law, and the peacetime regimes that apply to the oceans, airspace, outer space, and cyberspace. The international law in networked naval warfare must contend with autonomous vessels and

aircraft, artificial intelligence, and long-range precision strike missiles that can close the "kill chain" at sea and beyond. The asymmetrical use of merchant ships and blockchain shipping in naval operations, opening the seabed as a new dimension of undersea warfare, and sophisticated attacks against submarine cables and space satellites pose new operational and legal dilemmas. Navigating this broader conception of the international law of naval warfare requires an understanding of emerging operational capabilities and concepts throughout the spectrum of conflict and the selection and integration of distinct legal regimes."
