Résumé ou extrait : "In 2004, Japan instituted a system to protect citizens against military attacks and terrorism for the first time after World War II. Faced with the Tokyo subway attack (1995), the 9/11 terrorist attacks (2001), and the changing security environment in East Asia, the Japanese government was forced to implement the most extensive reform of its domestic crisis management ("Kiki-Kanri") system in the postwar era. Civil defense in Japan is now called The Civil Protection [Kokumin-Hogo]. Two world wars in the 20th century led to the development of national institutions based on civil defense in Western democratic countries (including the U.S. and Canada). As times have changed, most countries have adopted a comprehensive crisis (or emergency) management system, integrating civil defense and disaster management (against natural and technological hazards). However, Japan continues to take a different path. Why has a comprehensive crisis management system yet to be formed? How do complex and fragmented institutions work? This book examines the institutions and policies of civil protection (i.e., Japan's civil defense) and further analyzes their effectiveness and issues. Furthermore, it discusses the effectiveness and significance of the trade-offs created by the institutional coexistence of civil defense and natural disaster management. A valuable read for scholars of Japan's public administration and security/defense policy, as well as for those researching and comparing disaster-preparedness across countries." (page de garde)

Sujet - Nom commun : Protection civile -- Japon

Sûreté de l'État -- Japon

Gestion des situations d'urgence -- Japon
