Note sur le contenu : List of Figures and Tables Preface Introduction 1. The strategic geography of Eurasia's sea lanes 2. The changing geo-economics of the sea lanes 3. Linking land and sea: the transformation of Eurasia's rimlands 4. Guardians at the gate: the Anglo-Saxons and the Indo-Pacific 5. The challenger: China and Eurasia's sea lanes 6. The stem of victory: infrastructure and the sea lanes 7. The changing chessboard of sea-lane geopolitics 8. Shadows and critical uncertainties 9. Prospects and policy implications Notes Bibliography Index

Résumé ou extrait : Eurasian Maritime Geopolitics by Kent E. Calder examines the strategic geography of the sea lanes from Northeast Asia through the Indian Ocean to Europe, through which much of the world's energy and information flows. Calder shows how changing technology and economic patterns have profoundly transformed the global significance of those passageways since the end of the Cold War, with fateful consequences for the strategic calculations of both the United States and China. The book

provides readers a history of the changing economic role of the sea lanes. It chronicles how maritime flows of energy, commodities, and information through submarine cables have increased. Calder's clear-eyed assessment documents the uncertainties relating to Eurasian sea lanes stretching from Taiwan to the Red Sea and beyond in the post-Ukraine world.
