

Histological typing of cancer and precancer of the oral mucosa

Titre(s): Histological typing of cancer and precancer of the oral mucosa / J.J. Pindborg, P. A. Reichart, C. J. Smith and I. van der Waal] ; in collaboration with L. H. Sobin and pathologists in 9 countries

Autre(s) responsabilité(s): Organisation mondiale de la santé - Éditeur scientifique

Mention d'édition: 2nd edition

Editeur, producteur: Berlin : Paris [etc.] : Springer, cop. 1997

Description matérielle: 1 vol. (X-87 p.) : ill. en coul. ; 24 cm

Collection: International histological classification of tumours

ISBN: 3-540-61848-1

Appartient à la collection: Berlin 1967-... ed. World Health Organization Springer-Verlag International histological classification of tumours

Autre variante du titre: [Histological typing of oral and oropharyngeal tumours.]

Classification décimale Dewey: 616.99/431 21

Note sur l'édition et l'histoire bibliographique: La préface précise que l'édition précédente est parue sous le titre : "Histological typing of oral and oropharyngeal tumours / P.N. Wahi,...1971 (International histological classification of tumours ; 4)"

Note sur la description matérielle: La page de titre porte en plus : "with 80 colour figures and 13 drawings"

Note sur les bibliographies et les index: Index

Résumé ou extrait: La 4e de couverture indique : "This book differs from others in the Histological Typing series by including more clinical aspects and by concentrating on cancer and precancer of the oral mucosa rather than attempting to cover all benign and malignant tumors of the oral and oropharyngeal tissue. One main aim is to inform general pathologists of the significance of the clinical features of the various lesions discussed as, on the whole, they may be unfamiliar with this territory. Attention is also drawn to those conditions particular to the oral mucosa that may give rise to appearances which are important in differential diagnoses but can be misleading to the pathologist who does not have detailed knowledge of the tissue involved. The TNM-classification for malignant tumors of the lip and oral cavity is also included."
