

A realist account of stress, PTSD, and resilience

Type de contenu : Texte

Type de médiation : sans médiation

Type de support : Volume

Titre(s) : A realist account of stress, PTSD, and resilience : lessons from the United States Marine Corps / Frank Tortorello

Auteur(s) : Tortorello, Frank (19..-....)

Publication : London New York (N.Y.) : Routledge, 2022

Description matérielle : 1 vol. (X-399 p.) : ill. ; 24 cm

ISBN : 978-1-138-28352-7

978-1-032-06695-0

EAN : 9781138283527

Classification décimale Dewey : 616.852 12

Note sur les bibliographies et les index : Bibliogr. p. [381]-390. Notes bibliogr. Index

Résumé ou extrait : Présentation de l'éditeur : "In much of the discourse on stress, distress and resilience (SDR) in the US Marine Corps there is the recognition that the social somehow plays a role in the development of stress and distress. However, these arguments are most often grounded in the same fundamental and largely unchallenged assumption that stress and distress are essentially the result of brain functions. Even in the literature that focuses on the social implications of combat, stress and distress are most often conceived as traumatic damage to the psychology and mind of soldiers, and not as personal and socio-cultural constructions of a way of being. In a strong departure from the conventional discourse, Tortorello argues that such a reductive, neuroscientific approach to understanding SDR in the US Marine Corps fails both scientifically and ethically. Incorporating data from his ethnographic study of culture in the US Marine Corps, Tortorello proposes an agentic, socio-cultural approach that reconceptualises SDR as a way of being, wherein persons generate their own SDR through social and cultural mechanisms, rather than SDR presenting as the results of malfunctioning cognitive processes. This book will be of interest to scholars of medical and psychological anthropology, military studies, and American studies."
