Résumé ou extrait : "The open access anthology takes a holistic approach to how Russia carries out hybrid warfare against its neighboring countries - states at the intersection between the East and West. The volume addresses the vulnerabilities of these countries to Russian influence and hybrid warfare tactics, as well as their responses to this security challenge. It covers local developments in states such as Ukraine, Belarus, Finland, Armenia, Serbia, analyzing specific scenarios and practices to develop the current conceptual understanding of hybrid warfare as a phenomenon."
