Résumé ou extrait : Présentation de l'éditeur : "This volume explores the role of water in the Middle East's current economic, political and environmental transformations, which are set to continue in the near

future. In addition to examining water conflict from within the domestic contexts of Iraq, Yemen and Syria - all experiencing high levels of instability today - the contributors shed further light on how conflict over water resources has influenced political relations in the region. They interrogate how competition over water resources may precipitate or affect war in the Middle East, and assess whether or how resource vulnerability impacts fragile states and societies in the region and beyond."
