Type de contenu : Texte

Type de médiation : sans médiation

Type de support : Brochure

Titre(s) : Visual requirements for flying : some aspects of re-evaluation / Armed forces National research council comitee on vision ; Report of working group 20 Arthur Jampolsky,... Ailene Morris,...[et al.]

Auteur(s) : National Research Council États-Unis

Autre(s) responsabilité(s) : Jampolsky, Arthur (Éditeur scientifique)
Morris, Ailene (19..-....) (Éditeur scientifique)

Publication : [Lieu de publication inconnu] : Office of naval research, 1964

Description matérielle : 1vol. (25 p.) ; 28 cm

Note sur les bibliographies et les index : Notes bibliogr.

Résumé ou extrait : The complexity and variability of today's flying tasks and the relative inflexibility of the present visual standard requirements produce a problem area in the selection and retention of personnel. Increased flexibility and refinement of the visual classification system are required. The feasibility and actual need for extensive validation of visual standards in terms of specific performance are questioned. Communication is inadequate and liaison poor between operational visual specialists with personnel problems and visual scientists with possible solutions. (Author)
