Résumé ou extrait : "In a world best by pervasive cyber insecurity, it may seem odd to discuss the prospects for cyber peace. From ransomware impacting communities around the world, to state-sponsored attacks on electrical infrastructure, to disinformation campaigns spreading virally on social media, we seem to have relatively little bandwidth left over for asking the big questions, including: what is the best we can hope for in terms of "peace" on the Internet, and how might we get there? Yet the stakes couldn't be higher." (éditeur)
