Classification décimale Dewey : 343.099 9

Note(s) : Textes issus de communications, présentés lors d'une conférence du programme de La Haye pour les normes cyber, intitulée "Responsible behaviour in cyberspace", tenue à La Haye, du 5 au 7 novembre 2018

Note sur les bibliographies et les index : Bibliogr. en fin de chapitre. Notes bibliogr. Index

Résumé ou extrait : La 4ème de couv. indique : "Cyber norms and other ways to regulate responsible state behavior in cyberspace is a fast-moving political and diplomatic field. The academic study of these processes is varied and interdisciplinary, but much of the literature has been organized according to discipline, with rising interests in the fields of international law, political science, and international relations and governance. Both the broader field of the study of international cybersecurity and internet governance as well as the subfield of norms and state behavior in cyberspace are relatively young, making their way into specialized journals. Governing cyberspace : behavior, power, and diplomacy brings

together researchers from various academic disciplines around the theme of responsible state behavior in cyberspace. The contributors come from disciplines such as international law, international relations, business studies, political science, and philosophy. Governing cyberspace is divided into three parts. The first looks at current debates in and about international law in cyberspace. The second focuses on power politics, the way institutions (international organizations and legal instruments) adapt to the realities of cyberspace and digital conflict, and the normative behavior of states such as China and Egypt and substate actors such as intelligence agencies. The third part takes a critical look at multistakeholders and corporate diplomacy. How do global tech companies shape their role as norm entrepreneurs in cyberspace, and how do their cyber diplomatic efforts relate to their company identity ?"
