Note sur les bibliographies et les index : Bibliogr. p. [88]-101

Note sur le contenu : 1. Introduction 2. Danger in Dagestan 3. Theory: defection denied 4. Which experiment to choose? 5. The endorsement experiment 6. Analysis: a Bayesian measurement model 7. Conclusion Appendix Author biographies References

Résumé ou extrait : "How can researchers obtain reliable responses on sensitive issues in dangerous settings? This Element elucidates ways to use unobtrusive experimental methods to elicit truthful answers to risky, taboo, and threatening questions in dangerous social environments. The methods discussed in this Element help social scientists to encourage respondents to express their true preferences and to reduce nonresponse bias, while protecting them, local survey organizations, and researchers. The Element is grounded in an original study of civilian support for the jihadi insurgency in the Russian North Caucasus in Dagestan that assesses theories about wartime attitudes toward militant groups. We argue that sticky identities, security threats, and economic dependence curb the ability of civilians to switch loyalties"
