Note sur le contenu : New technologies and systemic security dilemma: US-China-India-Pakistan Indo-U.S. increasing strategic partnership and regional stability India's evolving nuclear strategy under the essentials of its minimum deterrence : limitations and challenges Pakistan's evolving nuclear policy: the pursuit of balance sans parity Crises dynamics and the escalation dominance strategy in South Asia Balancing and stabilizing South Asia : challenges and opportunities for sustainable peace and stability

Résumé ou extrait : La p. de garde indique : "This book explores evolving patterns of nuclear deterrence, the impact of new technologies and changing deterrent force postures in the South Asian region to assess future challenges for sustainable peace and stability. The prevailing security environment in South Asia is assessed under the core principles of the security dilemma to offer unilateral, bilateral and multilateral frameworks to stabilize peace in the region. Moreover, contending patterns of deterrence dynamics in the South Asian region are shown as becoming inextricably interlinked with broader security dynamics of the

Asia-Pacific region and the interactions with the United States and China's Belt and Road Initiative. As India and Pakistan are increasingly becoming part of the competing strategies played out by the United States and China, the authors analyse how strategic uncertainty and fear faced by these rival states cause the induction of new technologies. Presenting innovative solutions to emerging South Asian challenges and offering new future security mechanisms for sustainable peace and stability, this book will be of interest to academics working on Asian Security Studies, in particular South Asia, issues of nuclearization and nuclear policy and International Relations."
