Note sur le contenu : I. Introduction II. Rapid climate change in a resource constrained world III. Tipping points and high impact scenarios IV. Climate change risk management V. The two faces of climate security VI. Decision support for climate security VII. Responding to a changing geo-political landscape VIII. Tackling climate-change-driven conflict and instability IX. Climate change challenges to security systems

Résumé ou extrait : "In the next decades, climate change will drive as significant a change in the strategic security environment as the end of the Cold War. If uncontrolled, climate change will have security implications of similar magnitude to the World Wars, but which will last for centuries. The past will provide no guide to this coming future; a robust response will require clear assessments based on the best scientific projections. Security sector actors must not just prepare to respond to the security challenges of climate change; they must also be part of the solution. This Whitehall Paper outlines a framework for climate security analysis and some of its implications for security policy, practice and institutional change." -- RUSI
