Note sur le contenu : Flux in the energy world India's quest for energy security Flashpoints and
chokepoints Using market mechanisms for energy security Meeting India's energy challenge

Résumé ou extrait : "The global energy scenario has transformed in the past 20 years. Oil demand, earlier driven by the West, is now shifting to the East, more specifically to Asia. New oil supplies from North America have challenged the hegemony of the traditional oil exporters from West Asia and Africa. India, once a marginal player in the world oil market, is now a valued customer providing demand security to oil exporters. This book systematically examines India's oil and gas trade, which makes it the world's third largest importer of oil after China and the US. It explores the changing patterns of oil demand and supply, and the growing market for natural gas, renewable energy, biofuel, and alternative sources of energy. Further, the volume discusses a range of issues that affects India's position in the global energy

economy such as, The geographic shifts in energy production and trade; international relations and economic sanctions that affect the oil trade; India's quest for energy security; and contest with China for oil assets; Building new partnerships, and investing in stable, oil-rich countries like the US and Canada, while keeping up existing energy relations with Saudi Arabia, the UAE and Kuwait; Using market mechanisms to ensure energy security. Topical and comprehensive, this book in The Gateway House Guide to India in the 2020s series will be useful for scholars and researchers of international relations, geopolitics, foreign policy, security and strategic studies, energy studies, West Asia studies, South Asian studies, and international trade. It will also be of interest to policymakers, diplomats, career bureaucrats, and professionals working with think tanks, academia and multilateral agencies, media agencies, and businesses." (éd.)
