Résumé ou extrait : What does AI mean for the role of humans in war ? 'The AI Commander' addresses the largely neglected question of how the fusion of machines into the war machine will affect the human condition of warfare. James Johnson emphasises the 'mind' - both human and machine - and the mechanisms of thought (intelligence, consciousness, emotion, memory, experience, etc.) to consider the effects of AI and autonomy on the human condition of war. Johnson investigates the vexing and misunderstood - and at times contradictory - ethical, moral, and normative implications, whether incremental, transformative, or revolutionary, of synthesizing man and machine in future algorithmic warfare - or AI-enabled centaur warfighting.
