Classification décimale Dewey: 358.381

Note(s): No de "CSIS report", november 2006

Résumé ou extrait: Following Aum Shinrikyo's 1995 sarin attack on Tokyo subway commuters, revelations about the USSR's massive biological weapons program and Iraq's germ warfare program in the 1990s, and the sending of anthrax-laced letters to prominent U.S. politicians and reporters in the fall of 2001, a considerable amount has been said and written about the threat of biological weapons proliferation and what should be done about it
Cet ouvrage traite des armes biologiques et de leur menace sur les Etats-Unis qui militent pour leur non-prolifération, suite aux attaques d'anthraxe par courriers.
