Titre(s) : Data science for fake news : surveys and perspectives / Deepak P, Tanmoy Chakraborty, Cheng Long,... [et al.]

A pour autre édition sur un support différent : Data Science for Fake News Surveys and Perspectives by Deepak P 1st ed. 2021. 2021 Cham Springer International Publishing The Information Retrieval Series 978-3-030-62696-9

Auteur(s) : Deepak, Padmanabhan

Autre(s) auteur(s) : Chakraborty, Tanmoy (19...-....)
Long, Cheng
G., Santhosh Kumar

Publication : Cham, Switzerland : Springer

Date de copyright : C 2021

Description matérielle : 1 volume (xiv-302 pages) : illustrations, graph., tabl., fotogr. ; 25 cm

Collection : The information retrieval series 1871-7500 volume 42

ISBN : 978-3-030-62695-2
978-3-030-62698-3

EAN : 9783030626983 br.

Appartient à la collection : The Springer international series on information retrieval 1871-7500 42

Classification décimale Dewey : 070.43

Note sur l'édition et l'histoire bibliographique : Autre contributeur : Santhosh Kumar G.

Note sur les bibliographies et les index : Bibliogr. en fin de contributions

Résumé ou extrait : This book provides an overview of fake news detection, both through a variety of tutorial-style survey articles that capture advancements in the field from various facets and in a somewhat

unique direction through expert perspectives from various disciplines. The approach is based on the idea that advancing the frontier on data science approaches for fake news is an interdisciplinary effort, and that perspectives from domain experts are crucial to shape the next generation of methods and tools. The fake news challenge cuts across a number of data science subfields such as graph analytics, mining of spatio-temporal data, information retrieval, natural language processing, computer vision and image processing, to name a few. This book will present a number of tutorial-style surveys that summarize a range of recent work in the field. In a unique feature, this book includes perspective notes from experts in disciplines such as linguistics, anthropology, medicine and politics that will help to shape the next generation of data science research in fake news. The main target groups of this book are academic and industrial researchers working in the area of data science, and with interests in devising and applying data science technologies for fake news detection. For young researchers such as PhD students, a review of data science work on fake news is provided, equipping them with enough know-how to start engaging in research within the area. For experienced researchers, the detailed descriptions of approaches will enable them to take seasoned choices in identifying promising directions for future research.
