Résumé ou extrait : "What will be the strategic consequences for the United States by 2050 if America's two near-peer military competitors, China and Russia, continue to develop their long-term economic and security interests in the Arctic, but the United States does not ? Russia's growing economic and military ambitions in the Arctic, as well as China's increased physical presence in the region, underscore that both nations have long-term strategic designs for the Arctic region. Data analysis, satellite imagery, and scenario development all demonstrate the continued growth of Russian and Chinese presence in the Arctic and heighten the sense of stasis in the U.S. military and economic presence. Unless the United

States wishes to lose access to portions of the Arctic and have increasingly diminished capabilities to defend and deter attack against the homeland, the United States must return to the Arctic."
